6002 Assessment 1

Congratulations on finishing the first two weeks of 6002!

- Time: 50 minutes

- Open book

- Individual

Assignment

The goal of this assignment is to fill in each function stub in `assessment.py` according to its docstring and make the associated test pass.

There are 17 questions over these topics in this order:

- general Python (8 questions)

- numpy (2 questions)

- pandas (5 questions)

- APIs (1 question)

- mongoDB (1 question)

We recommend skimming over all the questions and solving the ones that you are most confident about first.

You can run the test with this command from the root directory:

```
make test
```

Good luck!
